

AD HOC DATA SHARING IN VIRTUAL TEAM ROOMS

5

ABSTRACT

A method of ad hoc data sharing for virtual teams rooms, including creating at least one user record representing a user granted access to digital assets, wherein each user
10 has a client device, at least two of the client devices are wirelessly coupled for data communications to at least one computer, and each user record comprises a user access privilege field identifying for each user that user's user access privilege for access to digital assets. Embodiments also include receiving from client devices digital asset records representing digital assets, retrieving digital assets in dependence
15 upon the location fields in the digital asset records, displaying the retrieved digital assets, and editing one or more of the retrieved digital assets, wherein the editing is carried out in dependence upon user access privilege and in dependence upon asset access permission.
